piccolo

P304 ¼ DIN Melt Pressure Indicator/Controller

... outstanding performance in an affordable package

The Eurotherm piccolo[™] P304i Melt Pressure indicator and P304c controller offer versatile solutions with advanced features and a wide range of hardware options that make them ideal for all types of plastic processing. Both units have a 50ms sample rate to give the fast acting control and alarm functionality required in the plastics industry. The P304c controller provides outstanding control performance in an affordable package for a wide variety of pressure sensors.

Input/output flexibility

A strain gauge or process linear input is standard with an optional strain gauge input for differential pressure control, or a universal input for remote setpoint. Up to two opto-isolated DC linear outputs are available for control or retransmission along with one standard logic input for alarm reset/acknowledge or zero calibration of sensor. An additional four logic inputs may be selected for remote activation of functions like auto/manual mode selection and increase/ decrease of power output.

The display

A custom, dual-line 5-digit display provides a complete view of the process while a horizontal bar graph gives clear visual indication of the process input. The status of alarms, outputs, active setpoint and engineering units are represented with clear beacons on the front of the unit.

Configuration

The P304 is fully software configurable using Eurotherm iTools PC configuration and parameter monitoring. Eurotherm iTools provides the ability to edit, store and 'clone' complete controller configurations as well as data logging and process monitoring capability.

Control Optimise Simplify

- Easy to integrate and use in new and legacy applications
- Fast-acting alarms to protect against overpressure
- Responsive, precision PID control with overshoot inhibit
- Easy, effective auto-tune
- Universal + strain gauge inputs
- Second input for differential pressure indication / control
- Analogue retransmission
- Easy and flexible configuration via PC software or front panel
- Modbus RTU digital communications
- High visibility three colour LED display
- Wipedown, customizable front fascia
- High reliability and quality
- Three year warranty

Ideal for

 All types of plastic processing applications including extrusion and injection molding

Eurotherm.

P304i Melt Pressure Indicator

The P304i is a fully programmable indicator with a single input configured for melt pressure measurement and the choice of wiring either strain gauge or amplified transducers to the unit. An optional second input provides an additional facility for differential pressure measurement if required.

The update time for each channel is 50ms to respond to very fast processes. To provide full process measurement, the second input can be configured for either Thermocouple or RTD temperature measurement.

Three preconfigured and ready to use alarms are associated to the process to detect high and low pressure conditions. A flexible alarm strategy enables shutdown of extruder at dangerous pressure levels.

P304c Melt Pressure Controller

The P304c Melt Pressure Controller provides accurate pressure or differential pressure control, ideal for plastic applications.

A clear display shows the main PV value along in the main area with a secondary variable beneath. The process input is also shown with a 35 point bar graph. Up to 24 dedicated LED beacons are further included to provide the operator with good visibility of the whole process status.

Accurate PI/PID control for Die Pressure gives fast and constant closed loop pressure control to give excellent process performance. Pre-tuning and adaptive selftuning algorithms further ensure good tuning of the control without the need for specific operator expertise.

A remote setpoint option, which can be either voltage or current, enables setpoint generation by a master controller or PLC. A wide range of control and retransmission linear outputs can also be selected without the use of hardware jumpers.

Specification	
General	
Environmental performance Temperature limits: Operation Storage Humidity limits operation: Panel sealing: Altitude: Atmospheres:	
Electromagnetic compatibility	(EMC)
Emissions and immunity:	Compliant with the European Directive 2004/108/CE according to Product Standard EN 61326-1
Electrical safety	Installation act. III. Dollution degree 0

For differential pressure calculation See main input P304c only: For differential pressure or remote setpoint See main input P304i only: J, K, L, N, T, E P304i only: 3-wire Pt100, Pt500 $>1M\Omega$ for thermocouple input <10Ω for linear current input $>165 k\Omega$ for linear voltage input 100, 200, 500 or 1000ms

Main Analogue Output

Sample rate temperature input:

Function:	P304i:	PV retransmission
	P304c:	Control output
Rating:		Configurable between:
		0/10 VDC, min. load 5kΩ
		-10/+10 VDC, min. load 5kΩ
		0/5 VDC min. load 5kΩ
		0/20 mA, max. load 500Ω
		4/20 mA, max. load 500Ω
Accuracy:		0.1% in manual mode, 0.03% in
		automatic mode
Resolution:		0.1% of output span
Isolation:		From input / output
Output filter:		Selectable: OFF, 0.4, 1, 2, 3, 4, 5s

Secondary Analogue Output

Function:	P304i:	Configured as pressure or temperature input retransmission
Output features:	P304c:	Acts as pressure input retransmission See main output

Relay Output

Rating:

Functions:

Alarm 1–2	
Type: Rating:	Form C (changeover) 2A max @ 240V ac resistive load
Functions:	Process alarm
Alarm 3	
Туре:	Form A (normally open)

Form A (normally open) 2A max @ 240V ac resistive load Process alarm

Digital Input

Reset/Cal (P304c and	P304i)	
Isolation: Functions:		None from PV Configurable as: Alarm reset Peak reset Alarm and peak reset Zero calibration of the primary input Zero calibration of the primary input, alarm and peak reset
1-2-3-4 (P304c only) _ Isolation: Functions:	Dig In 2: Dig In 3: Dig In 4:	Control output value decrease

Software Features Control . Number of loops: Control loop update: 50ms (typical) Control types: PI/PID Modes: Auto, manual, forced manual Tune algorithm from manual mode. Autotune: Adaptive algorithm in auto mode Transducer calibration . With or without shunt resistor Calibration types: Shunt resistor: Programmable from 40 to 100%, default 80% Alarms 3 Number: Type: Absolute high & low, deviation high, low or band Low masked on start up Auto / Manual reset Other features Peak monitor: Stores high or low values Automatic stand-by: Avoids overshoot caused by temporary process interruptions
